Validating and archiving electronic invoices with windream

New windream solution supports the processing of ZUGFeRD and XInvoices according to the EU standard

Bochum. windream GmbH extends its product portfolio by a new solution which allows automated electronic invoice processing. Users can thus validate incoming invoices which are based on the data exchange standard XInvoice or ZUGFeRD and archive them securely in the windream ECM-software.

During validation, the electronic invoices are first technically checked and, if errors exist, meaningful, detailed reports are generated in HTML format. The user can then decide whether to reject the respective invoice and send it back to the sender. If it is accepted, it will be transferred to windream together with the test report and the original PDF-document. Thereby, the information contained in it is used for indexing in windream.

"In contrast to scanned or simple PDF invoices, all booking-relevant information is already available as an XML file. This ensures faster processing, shorter processing times and thus better possibilities to use discount options", explains Werner Schlieper, Head of Product Management at windream GmbH.

Obligation for electronic accounting in public administration

According to the E-Invoicing Act of October 18, 2017, electronic invoicing in the federal public administration has been mandatory since November 27, 2020. This

means that invoices to public clients as invoice recipients must generally only be issued and transmitted in electronic form according to the "XInvoice" data format.

About windream GmbH
For 20 years, windream GmbH has been one of the top companies in the development and marketing of business software products for electronic archiving, digital document management and business process control or workflow automation. Especially for its ECM-system windream of the same name, the company is known nationally and internationally. More than 100 employees and a worldwide network of about 250 sales, integration and cooperation partners take care of more than 2,600 customers with more than 260,000 workstations.

About the windream Enterprise Content Management System
With the patented integration into the Windows operating system, the foundation for today's windream ECM-system was laid more than 20 years ago. With this unique approach, windream sets new standards in terms of intuitive handling, inspiring usability and user acceptance also in the current version 7. All possible solutions, whether e-file, e-mail management, invoice receipt, incoming mail, scanning, archiving, search and find, business process automation, workflow and mobile working are modularly designed. windream is equally flexible when it comes to integrations into third-party products, e.g. ERP, merchandise management and financial accounting solutions. Thus, companies can configure the windream ECM-system like a construction kit exactly according to their specific requirements. With the Dynamic Workspace, the latest windream version 7 successfully bridges the gap towards mobility and cross-platform availability under an interface which can be designed by the user himself. No matter if in the office with a PC or a laptop, a Smartphone or a tablet: Any time, any place, any device. windream Dynamic Workspace is included in the windream Business Edition and does not need to be licensed as an additional module. windream - just use it!
